Newsflash 2006/36

22-09-2006 Re-keying of KR priorities in DOCDB

At present there are a number of KR priorities in DOCDB with two different formats. Around 250.000 priorities have the same priority in both the 10 digit and in the 11 digit format. This weekend, a correction program will re-key all 10 digit formats into 11 digits.

This re-keying exercise will result in approx. 380.000 publications being re-triggered for exchange.

Please note that the corrections are not exclusively restricted only to the KR publications but will concern all the publication countries claiming at least one KR priority.

Week 39/2006 will contain these 380.000 publications in addition to the usual load.

With regards to the loading of front-file KR publication 2006, a formal announcement will follow in due course.
